

NORTHSPYRE + Nexus

A Seamless Integration

This three-way integration is set up with Nexus, ERP, and Northspyre. Not only does this allow Northspyre to send information to Nexus, but it also pulls back vendors and payments from ERP after you cut your checks.

If a member of the project team approves an invoice within Northspyre, that invoice will be reflected in Nexus including the category details, vendor information, and corresponding invoice information. From Nexus, invoices can sync with ERP where payment details associated with that invoice will automatically flow back to Northspyre to create a seamless experience.

Real Time Syncing

Northspyre automatically syncs with Nexus to ensure your data is consistent, updated in real time and your team isn't wasting time chasing errors.

Effective Team Coordination

Northspyre's three-way integration with Nexus and MRI enables accounting and development teams to better collaborate with project leadership, vendors and key stakeholders.

Keep Existing Workflows

Northspyre syncs with your existing email-based workflow and automatically extracts crucial data from project documents like invoices, contracts, proposals, etc.

Overnight Implementation

Northspyre can be implemented overnight, without a painstaking change management process that bogs down new software adoption.

How it Works
